softvoyage

Since 1987, Softvoyage has been powering the leisure travel industry by delivering innovative and robust IT and distribution solutions.

Softvoyage solutions enable the management, distribution and procurement of travel services for hundreds of tour operators, flight wholesalers, travel suppliers and travel agents:

- With best-of-breed back-end systems
- With Web distribution alternatives
- With robust shopping, comparison and booking tools

TTS™ and **Gulliver**™ are a few of Softvoyage industry-leading solutions that have been selected by top travel industry players around the globe.

At Softvoyage, you get the best of both worlds! By relying on a company and technology that have proven track records, you benefit from the out-of-the-box features which will fulfill the majority of your business requirements, while still keeping the required level of flexibility to adapt said features to match your particular business requirements.

With our uniquely skilled, dedicated and professional staff, we are committed to flawless execution and delivery, and ensure the highest level of support and satisfaction for our clients.

Application Development Approach & Technology:

As a leading provider of IT solutions for the travel industry, Softvoyage uses a modular software development approach and operates a scalable, redundant and flexible technological infrastructure that ensures the highest level of performance.

A Modular Approach:

Our modular approach enables customization of our solution components offering flexibility to accommodate your unique business requirements.

Operating Systems Flexibility & Open Source Standards:

Our systems are built to perform on various hardware platforms. For example, TTS™ for Tour Operators can run on multiple operating sytems, including Windows, Unix, or HP 3000.

Softvoyage Web technologies are built using the Linux Open Source standards.

Leading Edge Application Program Interfaces (APIs):

Softvoyage has a leading expertise in building best-of-breed application program interfaces (APIs) which enable a multitude of travel systems to exchange information in a coherent and consistent manner.

We created and continue to maintain direct supplier interfaces with all major Canadian tour operators, prestigious travel suppliers like Disney, Travco, Alamo Rent-A-Car, AirTransat, and AirCanada.

Softvoyage also maintains interfaces with all GDS and several credit card processing engines.

A unique electronic distribution network :

In 1993, Softvoyage created the first web-based leisure shopping database of Canadian leisure content, aggregating information on most vacation packages and charter flights. This is the foundation of SIREV™ (a B2B shopping & booking system used by most Canadian travel agents) and SIRRVA™ (a B2C shopping & booking system that powers the majority of Canadian online travel agencies).

Today, Softvoyage operates the largest Canadian leisure travel Web distribution network.

Our distribution network now supports all travel product types: air (including published, private fares, charters, webfares), vacation packages, dynamic packages, cars, hotels, insurance, attractions, etc.

Softvoyage Advanced XML™ (SAX™):

From a system standpoint, the electronic distribution of travel products involves the exchange and treatment of complex, diversified and continuously evolving information between numerous stakeholders and systems.

This is why we developed SAX™, a flexible platform acting as a master control center, along with various proprietary APIs using the XML standard language. The SAX™ platform also enables the easy and rapid:

- Addition of new types of travel products or new sources
- Creation of new business rules on information treatment
- Standardization of updates, and migrations, along with significant economies of scale
- Addition of new participating travel suppliers in Softvoyage distribution network

State-of-the-Art Hosting:

Over the years, we have earned significant hosting experience and know-how as an application service provider (ASP) by offering hosted solutions to our customers. Softvoyage ASP model means less costs and complexity for our clients. Our solutions can be installed locally at our clients' premises or housed internally in our state-of-the-art Internet data center which features OEM-only hardware, high-speed connectivity, 24/7 monitoring, software protection, e-commerce security, and advanced physical security (including restricted access, fire protection, climate control and power fail-over systems).
