To whomever it may concern,

As you will notice by looking at my resume, references and portfolio, my quality and competences are rather broad. I've been playing around with the web technologies since 1995. In 2003 I moved to Shanghai, in China, and after working for about a year as a freelancer designing various websites and corporate images, I accepted an offer to work for a Shanghai Educational organisation, which is « Xiehe Education Group ». This is where I expanded my field of competences by administrating Linux servers, configure mail servers, create, run and manage websites based on Drupal, Wordpress et Moodle, and I even built some custom-coded web applications using PHP/MySQL. I therefore now am not only at ease designing and building front-end websites and applications, but I can also administer Linux servers and applications running on it. I am one of those rare specimens who can perform evenly well doing simple graphic design than more technical, hand-coded HTML/CSS/PHP code.

After working more than 10 years in China, in 2012 I took the decision to come back to live closer to my relatives here in Québec. After nearly 2 years in Québec and having experimented again as a web designer, I now realize that I'd like to continue to expand my horizons a little more in this field. In the last two years I have accumulate hours upon hours updating my skills to HTML5 and Responsive designs and I'd love to continue doing so in an exciting working and learning environment.

I am therefore available for the displayed job offer, otherwise I am also open to any other position(s) for which you might judge that I have the necessary competences.

Thank you for your attention, hoping to hear from you shortly,

David Gagnon
